

Speeding towards dangerous climate change

Public forum on climate and transport – 15 June 2008

Hear what the world's leading climate scientists are discovering about the speed of climate change, the potential impacts on our way of life, and what we need to do to safeguard our future.

- Sir Rod Eddington has recommended we spend \$18 billion on transport infrastructure, but says this will have 'minimal' impact on transport emission trends. Meanwhile transport emissions are forecast to grow by more than 60% over 1999 levels by 2020. Can we do better?
- Government ministers claim freeways offer environmental benefits and getting more 'clean' cars on the road is the solution, but are they effective?

Guest speakers include:

David Spratt

Climate-policy analyst and co-author of **Climate Code Red**

Dr Patrick Moriarty

Senior Research Fellow at the Australasian Centre for the Governance and Management of Urban Transport (GAMUT)

Elliot Fishman

Policy advisor, Cycling Promotion Fund

Plus panel discussion and question time.

When: Sunday 15 June 2008, 2:30 – 4:30pm

Where: Melbourne Town Hall, Swanston Street

RSVP: office@ptua.org.au
